

2021 NGTL System Expansion Project

Committed to safety

Claudia Sanchez

PROJECT MANAGER

Claudia leads work on the northern portion of the Deep Valley Pipeline Section and, like all of our project management team, is also a safety leader. Please take a moment to hear what Claudia has to say about our number one priority on the Project, and across our business.

“ Hi, my name is Claudia. I am the project manager of the Deep Valley North Section within the Project.

The number one priority of all project managers on the Project is to make sure the crews, environment and all communities we're working with are safe. The culture we've built at TC Energy encourages all of us to think about safety as everyone's responsibility, and it is our job as leaders on our respective work sites to set an example for everyone to follow.

All project crews will have daily safety meetings and proactively share ideas on how to improve our safe work performance. We will reinforce a disciplined set of rules and provide rigorous and continuous training so our goal of zero incidents is integrated into our daily work.

I'm proud to know the Project will be built and operated to the highest safety standards. If you'd like to know more about our safety culture, click on the links and reach out to us with any questions you have. ”
