

2021 NGTL System Expansion Project

# Working with landowners

## Graeme Wright

MANAGER, LAND PROJECTS

Graeme would like to share more with you about our commitment to meaningful engagement with all of our landowners and neighbours.

“ Hi, I am Graeme and I am the Manager for Land Projects at TC Energy.

TC Energy builds, operates and maintains assets that last generations, so we approach our relationships with landowners who may be affected by our activities with the long-term in mind.

The Land Projects Team is responsible for items like the acquisition and maintenance of all freehold land agreements, Crown land dispositions, and Third-Party agreements associated with crossings and road use.

We are also responsible for maintaining relationships with all directly and indirectly affected landowners and occupants along the right-of-way, as well as those who may be impacted by our construction activities.

The land team has been engaging landowners, occupants, and land users on the 2021 NGTL Project for several years, and we look forward to continuing to grow these relationships.

I invite you to click through the links for more information on how we work with landowners, and to submit any questions or feedback you might have. ”
